## DETAILED ACTION

### *Continued Examination Under 37 CFR 1.114*

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114.

Applicant's submission filed on 3/12/2004 has been entered.

### *Claim Rejections - 35 USC § 102*

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 56 and 57 are rejected under 35 U.S.C. 102(e) as being anticipated by Tabata (US Patent No. 6,151,060).

As to claims 56 and 57, Tabata discloses a mixed reality presentation method comprising: an input step of inputting a sensed image sensed by a camera (19, Fig. 3); a detecting step of detecting location information of a first player (e.g. the player space sensor 15 for sensing location information of the player); a virtual image generating step of generating a virtual image (22, 27, 28) to be superimposed on an image of player (e.g. player's hands) included in the sensed image based on the location information and a player model (e.g. player's hands); and a
